

**METHOD, SYSTEM AND PROGRAM PRODUCT FOR MANAGING SYSTEM  
RESOURCES**

**ABSTRACT OF THE DISCLOSURE**

A method, system and program product for managing system resources. A resource is provisioned for a service based on a demand for the service and one or more attributes of the system. For example, provisioning a resource for the service can be based on the demand for the service as well as a demand for another service sharing the system. The provisioning can be based on any combination of various other attributes of the system along with or instead of the demand for another service.
